Gaurav Surtani

AI Engineer, Product Builder

San Francisco Bay Area · gaurav.surtani.tech@gmail.com · gauravsurtani.github.io · linkedin.com/in/gaurav-surtani · github.com/gauravsurtani

SUMMARY

AI engineer with eight years in full-stack, data and ML engineering, building LLM applications. Currently the founding and sole engineer on DeepLearning.AI's three AI recruiting products.

EXPERIENCE

DeepLearning.AI — Founding AI Engineer — **Sep 2025 – Present** · San Francisco Bay Area

- Built the AI technical interviewer used in live hiring, with evidence-based grading that ties every skill score to a verified transcript quote, so hiring managers can decide from the report alone.
- Built and maintain the recruiter sourcing and review tool: migrated it from Railway to AWS with zero-downtime deploys, added bulk actions for 1,000 candidates, and cut LLM scoring costs.
- Designed and built the Valence Career Agent, which helps candidates find their next role: it learns their goal, background and job constraints, runs a technical assessment, and returns a growth report with a positioning statement, answer coaching and a three-part growth plan.
- Built a job-data pipeline tracking careers pages at 1,400+ companies, with 99,000+ jobs collected and 78,000+ live, to power role recommendations.
- Exposed the sourcing tool as a scoped API for internal tools, and published dlai-mcp-server on npm for searching DeepLearning.AI courses from Claude Code, Codex and Cursor.

Blog2Podcast — Founder, side project — **Mar 2026 – Present** · blog2podcast.com

- Built and run a pipeline that turns engineering blogs from 15 companies into daily AI-narrated podcasts.

Tassel — Full Stack AI Engineer — **Jun 2025 – Sep 2025** · Remote

- Built a video pipeline that segments graduation ceremony recordings by student and delivers personalized clips to 2M+ students, an $8M+ revenue opportunity.
- Built a multi-agent transliteration chain on OpenAI that converts each student's name into its native-language script, so an ElevenLabs native voice pronounces it correctly in ceremony announcements.
- Moved heavy Azure pipelines from always-on to on-demand scaling, cutting costs 40% and processing 8x faster.

Bexorg — Full Stack AI Engineer — **May 2024 – May 2025** · New Haven, CT

- Built a natural-language analytics tool that turns plain-English questions into Plotly and D3 dashboards, cutting analysis time 75%; a key sales differentiator that helped convert pilots to contracts.
- Built a real-time data visualization platform on Neo4j and BigQuery with role-based access for 40+ users, cutting retrieval time 45%.
- Built an ML quality-control system for time-series data with real-time anomaly detection, reducing data issues 70%.
- Resolved critical pipeline bottlenecks, improving throughput 10x and enabling new enterprise customers.

NASA Ames Research Center — Machine Learning Developer — **Dec 2023 – Mar 2024** · Mountain View, CA

- Analyzed flight-path adherence to air traffic control procedures with GeoPandas and Pyproj, identifying navigation patterns that informed aviation fuel-cost optimization.
- Automated data validation across 1,000+ flight paths, reducing manual verification from 4 hours to 15 minutes, and containerized the legacy analysis system.

EARLIER EXPERIENCE

San Jose State University — Research Assistant — 2023 – 2024
Ascendion (formerly Collabera) — Software Engineer → Senior Software Engineer — 2021 – 2023
Accenture — Software Engineer — 2018 – 2020
Enthralltech — Frontend Developer — 2018

SKILLS

AI: LLM applications and agents (Gemini, Claude, OpenAI), LLM evaluation, retrieval and vector search, MCP servers, speech (STT, TTS, real-time voice), LangChain

Engineering: Python, TypeScript, FastAPI, React, Next.js, PostgreSQL, Redis, Neo4j, BigQuery, Playwright

Infrastructure: AWS (ECS, RDS, Terraform), GCP, Azure, Docker, Kubernetes, GitHub Actions

EDUCATION

MS, Artificial Intelligence, San Jose State University
